01_INTRODUCTION

_FLOORS FOR A BETTER TOMORROW

As a leading German manufacturer of wall and floor coverings, CLASSEN stands for technological leadership and sustainability. True to the company slogan, around 2,000 employees worldwide are committed to a sustainable future in all areas of the value chain. With great passion and competence, they achieve outstanding results - from the saving of resources through the long life cycle to the complete recycling of the healthy for living wall and floor coverings.

CLASSEN consciously avoids the use of chlorine, PVC and plasticisers in its CERAMIN® based home-healthy wall and floor coverings. With CERAMIN, CLASSEN has developed a material that consists largely of plastic recycles and is 100 per cent recyclable. In this way, CLASSEN makes an exemplary contribution to the circular economy.

02_DESIGN

_PRECISELY DESIGNED

The CLASSEN in-house design centre at our headquarters in Kaisersesch is the creative heart of our entire company. This is where all decors are carefully planned, developed and crafted by hand. Our designers collect ideas from all over the beautiful nature of the world and bring them to your home.

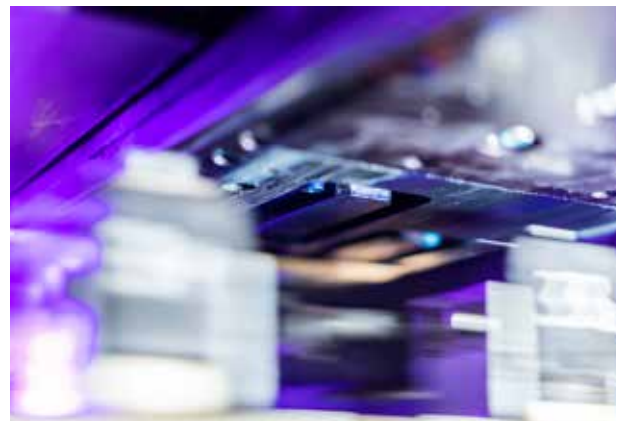

From visiting the nearby beech or oak forest to processing the wood selected in the forest in our manufactory and scanning the designs with our high-performance scanner, the design development process is often hard work until the desired result and quality are achieved.

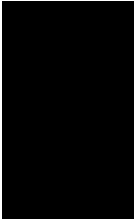

_HIGH-PERFORMANCE DIGITAL PRINTING

The CLASSEN in-house design centre at our headquarters in Kaisersesch is the creative heart of our entire company. This is where all decors are carefully planned, developed and crafted by hand. Our designers collect ideas from all over the beautiful nature of the world and bring them to your home.

From visiting the nearby beech or oak forest to processing the wood selected in the forest in our manufactory and scanning the designs with our high-performance scanner, the design development process is often hard work until the desired result and quality are achieved.

_INTERIOR TRENDS

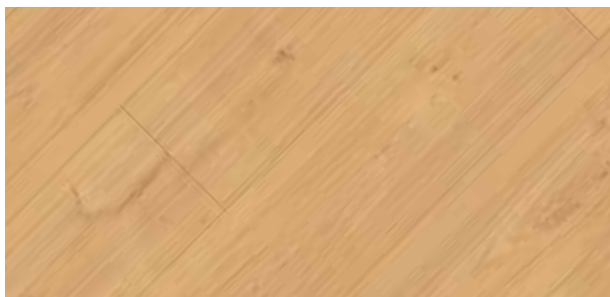

Interior design and sustainability increasingly merge in the area of floor design. People are demanding more sustainable flooring products that are both environmentally friendly and long-lasting.

This also applies to the design of the floor. The trend is to choose a design that doesn't get boring so quickly: replacing a floor after a few years because you no longer like the colour or the grain is outdated.

The bestseller by far: oak decors in various colour gradations and grains. Not only does it look high-quality, it also harmonises perfectly with current trends.

03_HEALTHY LIVING

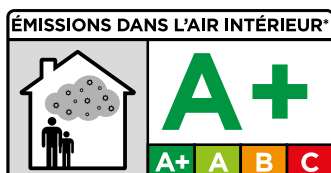

_SUSTAINABLE WITH NO SACRIFICES

PVC is repeatedly criticised for its negative effects on our health and the environment. This is why CLASSEN consistently decided against the production and processing of PVC years ago.

With the development of the CERAMIN material, CLASSEN now offers a floor covering that is not only PVC-free, but also free from chlorine, phthalates and other plasticisers. This makes the material ideal for health-conscious living.

www.blauer-engel.de/uz120

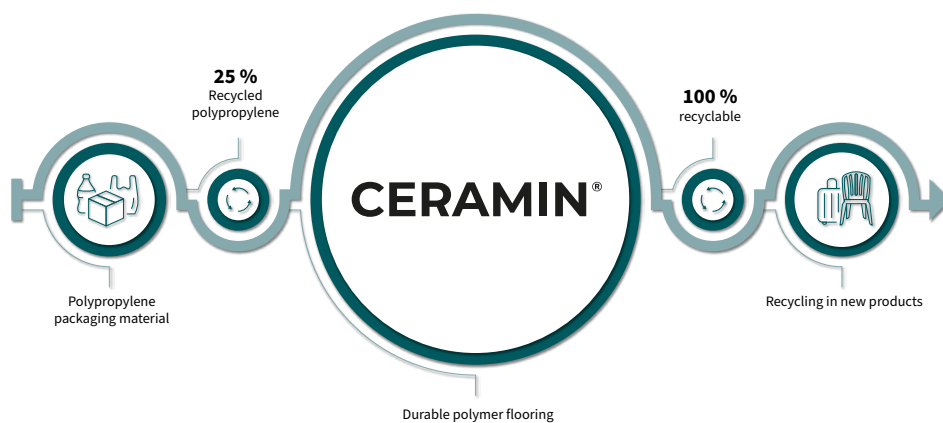

_THE FUTURE OF FLOORING STARTS WITH CERAMIN

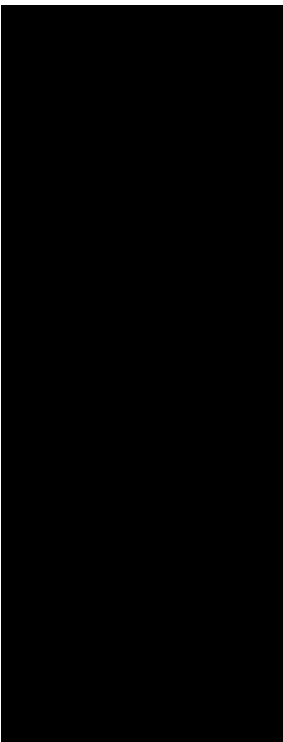

CERAMIN floor coverings consist of at least 25 per cent recycled materials, so-called recyclates. The polypropylene recyclates used in CERAMIN were previously, for example, a yoghurt pot, a tomato shell or detergent packaging.

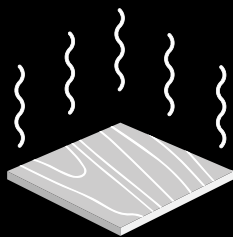

CERAMIN can also be recycled after its life cycle. In addition to being reused in a new flooring product, this also means that the raw material can be reused outside the flooring industry.

_HEALTHY LIVING

Healthy living is an increasingly relevant topic, as we spend 80 to 90 per cent of our lives indoors and breathe an average of 20,000 times a day. Floors take up a large area in a room and therefore have a major influence on the indoor climate and healthy living.

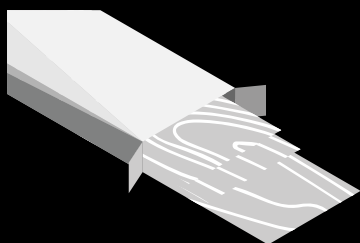

We spend

90%

of our lives indoors.

CERAMIN floors are free of harmful substances.

CLASSEN avoids using

30

tonnes of plastic packaging per year and uses solid cardboard packaging instead.

CERAMIN has a recycled content of

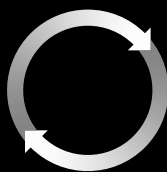

25%

PP recycles. Confirmed by the Recyclash by Plastship certification.

We breathe an average of

20,000

times a day. CERAMIN floors fulfil the requirements of the eco-Institut label, the Blue Angel environmental seal, as well as A+ and Greenguard.

98.5%

of rejects can be reused in our production. Plastship rates CERAMIN as „very good recyclable“.

CERAMIN®

CERAMIN is free of PVC and plasticisers.

CERAMIN's EPD (Environmental Product Declaration) provides quantitative information on the environmental performance of the product.

We use solvent-free ink for printing our cardboard packaging.

CLASSEN saves

25,000

tonnes of raw oil by using PP recycles. We currently use 26,000 tonnes of recycles per year.

04_FEATURES

_AESTHETICS MEETS MAXIMUM FUNCTIONALITY

With NUVA, aesthetics and technology simply belong together. The textured, ultra-matt surface, which even appears matt in the pore base, is designed to realistically reflect the underlying decor and create a natural feel.

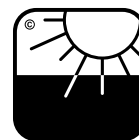

The hybrid surface of NUVA has a multi-layer structure. On the one hand, it consists of a transparent wear layer with a UV-curing acrylic lacquer system and, on the other, a textured foil that is carefully matched to the decor underneath. The combination of lacquer and foil makes the surface highly resistant and protects the floor from abrasion, scratches and stains.

flame-retardant (fire class Bfl-s1)

Non-slip (class R9/R10)

Highly lightfast (light fastness level 7)

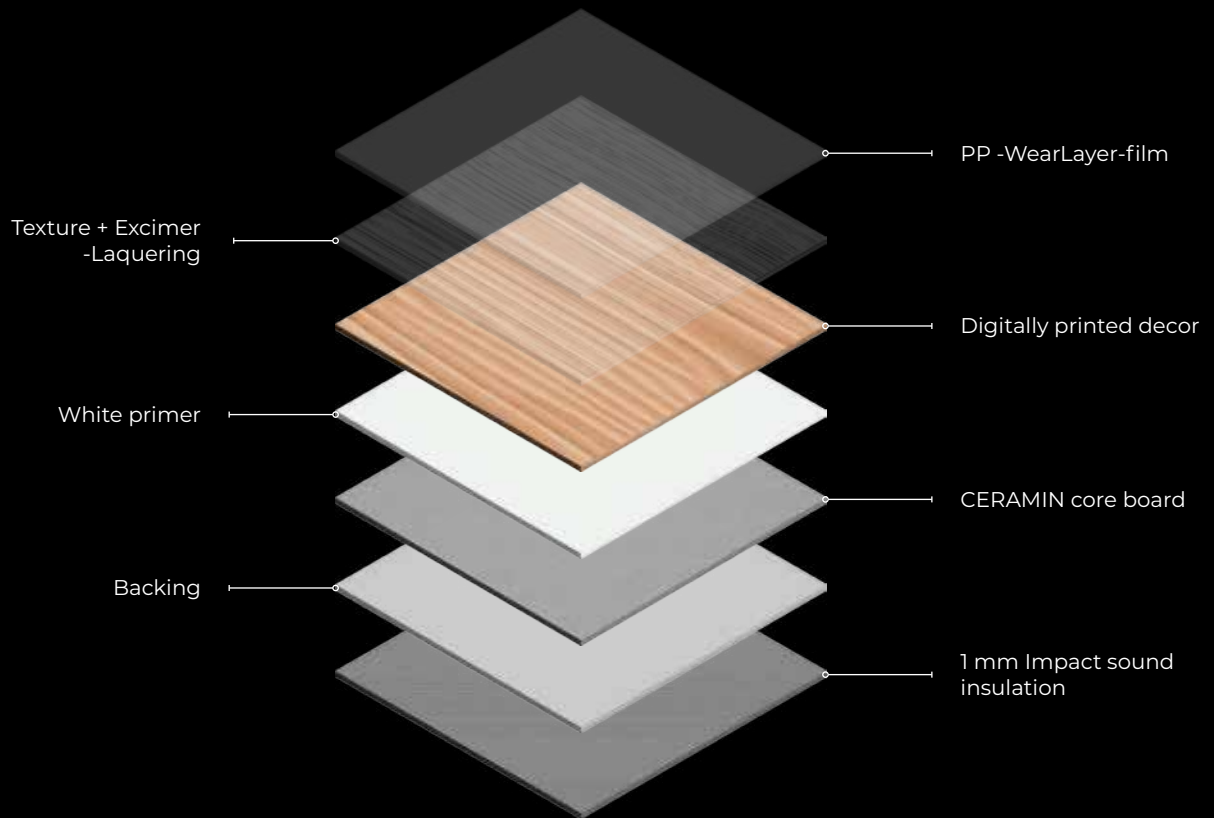

_PLANK COMPOSITION CLICKING AND GLUING

With NUVA, appearance and technology go hand in hand. The textured, ultra-matt surface, which even appears matt in the pore base, is designed to realistically reflect the decor underneath and create a natural feel. The hybrid surface of NUVA has a multi-layer structure.

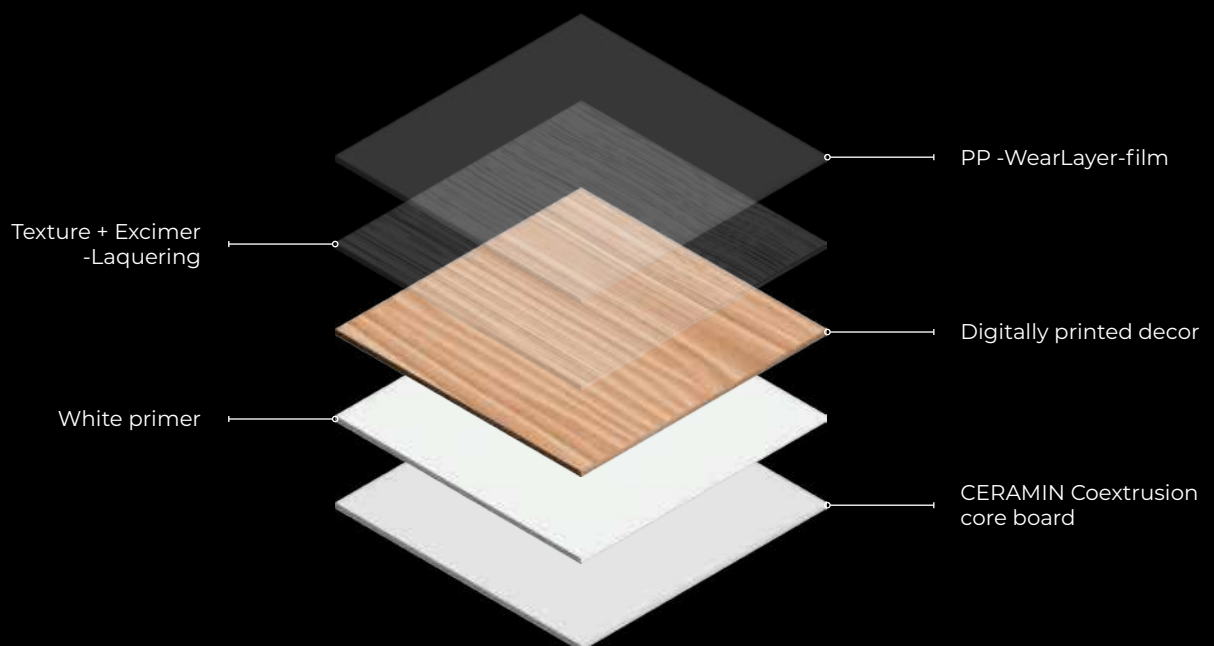

On the one hand, it consists of a transparent wear layer with a UV-curing acrylic lacquer system and, on the other, a textured film that is carefully matched to the underlying decor. The combination of lacquer and film makes the surface highly resistant and protects the floor from abrasion, scratches and stains.

_CLICKING

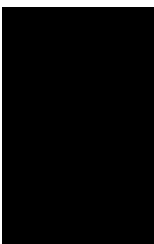

_GLUING

_AN ALLIANCE OF A LIFETIME

Whether Essential, Eternal, Selected or Rock, NUVA for clicking is equipped with integrated, 1 mm thick impact sound insulation. This eliminates the need for an additional underlay. Not only does this save you a work step during installation, it also ensures a strong connection between the plank and the underlay.

It also makes storage and logistics easier and more efficient. Another advantage: the entire floor covering can still be recycled at the end of its service life. Like CERAMIN, the integrated impact sound is based on polyolefins and can therefore be easily recycled together with the floor covering.

_BRING ON THE WATER

Similar to high-quality outdoor clothing, the difference between „water-resistant“ and „waterproof“ is also very important for floor coverings. The weakness lies not in the material itself, but in the joints. In the case of a rain jacket you have to pay more attention to the seams, in the case of floor coverings to the joints. Although the materials used in the industry for the core boards of vinyl or rigid flooring are generally water-resistant, the joints between the individual planks are not absolutely waterproof. As a result, there is a risk of water penetrating through the joints and damaging the subfloor.

NUVA Selected and Rock face this challenge. This is where our megaloc-aqua-protect technology is applied, which has been tried and tested for years in our laminate flooring. It prevents water from penetrating through the grooves. The special shape of the joint prevents water from penetrating through the connecting joints of the flooring and thus contributes to a carefree and worry-free living environment.

05_NUVA

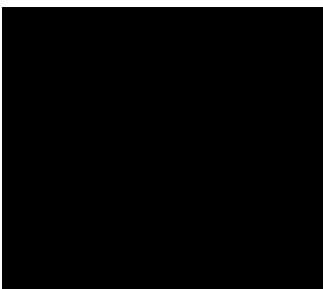

_NEXT GENERATION CERAMIN

NUVA is characterised not only by technological advances such as a bevelled edge in the wear layer, but above all by the authentic and natural designs that allow maximum flexibility due to digital printing.

From elegant dark walnut decors to modern stone designs, NUVA harmoniously combines aesthetic demands with functionality.

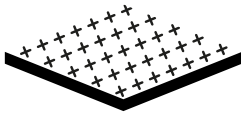

A significant innovation is that you now have the choice: „clicking or gluing“?

Whereas previously there were restrictions in terms of the installation method, you can now choose from our modular system to suit your area of application, whether you want to use the decor as an innovative click system or as a dryback for full-surface bonding.
